

HYBRID IOT CONNECTIVITY

Cellular first. Satellite ready.

The Iridium 9604 SBD module extends your IoT solution beyond cellular range, keeping assets, people, and infrastructure visible no matter where they are in Australia.

The Iridium 9604 is a **module only**, for existing hardware or new end-to-end solutions. Talk to us about pairing it with the right cellular plan.

• **Telstra 4G/LTE**
Cellular

• **Iridium SBD**
Satellite

Use **cellular** as your primary network. Keep **satellite** ready for the gaps, the outback, and the safety-critical moments.

■ FIVE VERTICALS, ONE HYBRID SOLUTION

Indicative plans by use case

...

Asset tracking

Trailers, containers, plant machinery, ag equipment

• **CELLULAR**

from **\$5.75** **5MB-10MB Group**
Position and status pings over cellular. Right-size to duty cycle: 5MB for hourly, 10MB for continuous.

• **SATELLITE**

\$22 **SBD-2.5 Pooled**
Position packets when the asset sits off-grid. Size up to SBD-5 for assets in remote paddocks for extended periods.

Remote monitoring

Pump stations, tank levels, substations, SCADA

• **CELLULAR**

from **\$7.00** **10MB-30MB Group**
SCADA reads, periodic telemetry, event-driven alarms. Size down to 5MB for alarms-only sites.

• **SATELLITE**

\$31 **SBD-5 Pooled**
Alarms and watchdog pings from low-coverage sites. Size up to SBD-10 for satellite-primary or high-alarm-frequency infrastructure.

Agtech

Paddock sensors, livestock tracking, irrigation, weather stations

• **CELLULAR**

from **\$4.65** **3MB-5MB Group**
Solar-powered sensors on a low duty cycle. 3MB suits most sites; size to 5MB for livestock trackers or higher-frequency reporting.

• **SATELLITE**

\$22 **SBD-2.5 Pooled**
Back-paddock telemetry beyond any tower. Size up to SBD-5 for livestock regularly reporting position off-grid.

Field safety / lone worker

Mining, exploration, marine, forestry. SOS must always get through

• **CELLULAR**

\$5.75 **5MB Group**
Regular, cost-efficient check-ins over cellular: position, status, and two-way messaging where coverage exists.

• **SATELLITE**

from **\$39** **SBD-10-15 Pooled**
The one vertical where we size satellite UP. SOS and location must get through. You cannot be capacity-constrained on a safety packet. Do not size down.

Fleet & logistics: rural and regional

Interstate trucks, cold-chain, ELD, refrigeration monitoring

• **CELLULAR**

from **\$7.00** **10MB-30MB Group**
Continuous status, refrigeration sensors, load telemetry, ELD. Size down to 5MB for light-telemetry fleets.

• **SATELLITE**

\$31 **SBD-5 Pooled**
Keeps the dashboard live across cellular gaps between towns. Size up to SBD-10 for long-haul routes or cold-chain with frequent off-grid temp reporting.

• Cellular pricing per SIM/month on Telstra 4G/LTE Group Plans (pooled). Volume discounts at 100, 250, 500+ services. Prices shown at 1-99 tier.

• Satellite pricing is the MRC for active pooled Iridium SBD service. 12-month term. Sessions in 1-byte increments, 10-byte minimum. All prices AUD ex-GST.
